

# Installation Instructions

## TOP-MOUNT STAINLESS STEEL SINKS

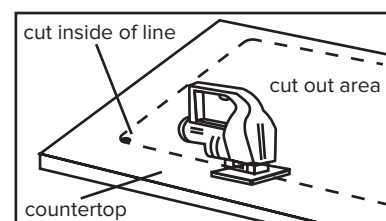

VOGT INDUSTRIES (“VOGT”) strongly recommends professional countertop installers for sink installation and licensed/experienced professionals for plumbing installation and is not responsible for damage to the countertop or sink during installation (please see VOGT warranty for details).

Topmount sinks are installed from above the countertop and sealed to the top of the counter.

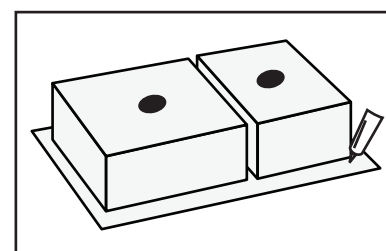

1. Unpack the new sink and check the contents of the materials supplied: sink, strainer(s) and cutout template.
2. Inspect the sink for damage. Do not install a damaged unit.
3. Make sure the cutout template is the same size as the sink. Place template in a desired position on your countertop.

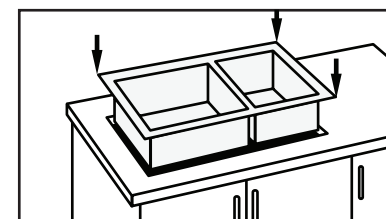

4. Trace the outline of the template and cut the countertop according to the outline using appropriate cutting tools.  
**Please note: template is to be used as a guide only.** Use actual physical sink to ensure accurate cutout.

5. Install faucets, soap dispenser and other accessories before installing the sink. Put mounting clips into position on the sink at evenly spaced intervals. Apply continuous bead of silicone sealant under the sink edge.

6. Lower the sink into the cutout hole. Fix the sink by tightening mounting clips with the screwdriver.

7. Wipe away excess silicone caulk with damp cloth. Make proper water and waste pipe connections.
